

## PROJECT OVERVIEW

When a devastating hail storm ripped through a small town in Georgia, this private school was left with damage that compromised the integrity of the roof. With 11 total buildings equaling approximately 90,000 sq. ft., this job was no small feat. School personnel also needed the job to be turned around quickly so that classes could start on time in the fall. Stellar worked diligently with school leadership to work out a timeline that resulted in the roof being finished in time for the fall semester.

## THE STELLAR TOUCH

- » Responded within 48 hours of hail storm
- » Crew worked in compliance with OSHA while putting in long hours to complete the project
- » Project was completed in less than 2 months, and classes resumed on time
- » Worked around staging issues with the material as the buildings were in close proximity
- » Had several opportunities to deliver on our solution-based approach

## CLIENT TESTIMONIAL

"[We had] a very positive experience. The folks representing [Stellar] were friendly and professional. I was impressed by the consistent messaging, integrity of the company and the relationships with the school. The workers were phenomenal...I would recommend Stellar to any school in a similar situation."
